Fundamental

Expect futures to open on a cautious note today on a potential of profit taking activities following mixed overnight Wall Street performance and crude oil weakness while downside might be limited on bargain buying given the improving local sentiment. Back in the state, after initially rallying to start the day, U.S. stocks closed mixed on Friday as strong bank results carried the Dow higher while the S&P 500 and Nasdaq closed in the red but ended the week up as companies largely welcomed in earnings season with better-than-expected results and economic data showed consumers feeling more confident about easing 1415.50 inflation. On the external front, Asian bourses continue its upward trust on Friday, buoyed by the encouraging signal from global stock markets as cooling U.S. this month and Beijing is actively preparing stimulus measures, which are expected to yield favourable results for China's technology sector. Locally, the FBM KLCI erased previous session losses to end near its intraday high on last Friday, in line with its regional peers' uptrend on continued buying activities in 1390.15 most index linked heavyweights on improved risk appetite. The index closed at 1,412.09, rose 15.86 points, at its highest in seven weeks led by the gains in GENT, CIMB, HLBK, PCHEM and MAY shares. Futures to cash basis strengthened to 3.5 points premium from Par.

Futures contract opened gap up and traded gradually higher throughout the trading session on buying interest after yesterday's rout following strength in the underlying cash and in line with regional peers upbeat tone. The July futures contract settled 19 points higher at 1,415.5, forming a long white bodied candlestick with short upper and shaven bottom shadow, indicating an aggressive buying activity during the session. Technical wise, MACD indicator remained issue a buying signal while RSI indicator lingered at neutral region. However, expect futures to trade open on a back foot note today on a likelihood of profit taking activities mirroring overnight mixed U.S. equities market and stumble in crude oil prices as participants locked in profit after recent rally while downward pressure could be limited on bargain buying in local bourse given the improving risk appetite. Thus, the support and resistance can be eyed at 1,405.0 and 1,423.0 respectively.
